EDUCATION

MASTER IN COMPUTER SCIENCE AND ENGINEERING — Cesena, Italy
Alma Mater Studiorum, University of Bologna — *Dec 2021 - Dec 2023*

BACHELOR IN COMPUTER SCIENCE AND ENGINEERING — Cesena, Italy
Alma Mater Studiorum, University of Bologna — *Sep 2021 – Dec 2021*

TECHNICAL TECHNOLOGICAL DIPLOMA — Cesena, Italy
ITT Blaise Pascal — *Sep 2021 – Dec 2021*

EXPERIENCE

PagoPA S.p.A. — Rome, Italy (Remote)
Mobile Software Engineer — *Oct 2024 – Now*

Core contributor to IO App, a nationwide public-service mobile platform used by millions of Italian citizens.

- Design and implement scalable features using React Native with native iOS/Android integrations
- Contribute to architectural refactoring initiatives reducing long-standing technical debt
- Improve performance, accessibility (WCAG), and state management across domains
- Develop end-to-end service flows for national initiatives (Bonus Elettrodomestici, Carta della Cultura, Carta Giovani Nazionale)
- Developed and maintained the CGN – Portale Esercenti web platform using React, enabling partner merchants to manage onboarding, offers, and compliance workflows within the IO ecosystem
- Enhance wallet and payment systems by standardizing navigation and error handling
- Collaborate cross-functionally with product, design, and platform teams to deliver reliable, compliant features
- Support CI automation and mobile release processes

myDev S.r.l — Forlì, Italy (Hybrid)
Software Engineer — *Dec 2023 – Oct 2024*

Core contributor to MyVem, a cloud service orchestration platform developed by VEM Sistemi, enabling centralized monitoring and management of complex technological infrastructures.

- Led migration from Create React App to Vite, significantly reducing build times and improving developer experience
- Introduced modular architecture, clean code standards and Typescript across the frontend codebase
- Designed and implemented CI/CD pipelines with automated versioning and changelog generation
- Integrated SonarQube to monitor code quality, security, and technical debt
- Built centralized Storybook design system, improving UI consistency and team collaboration
- Implemented real-time notification systems using SignalR
- Strengthened automated testing strategy with Vitest

DERNetSoft Inc — California, US (Remote)
Software Engineer — *Nov 2020 – Oct 2023*

Played a central role in building a scalable energy-tech platform leveraging a microservices architecture to manage and analyze high-volume production and consumption data.

- Architected frontend and mobile solutions using React, React Native, and TypeScript
- Designed secure, scalable microservices with authentication, rate limiting, and compression
- Engineered data connectors for integration with time-series data storage systems
- Participated in technical roadmap planning and architectural decision-making
- Established shared component libraries to standardize UI and improve development velocity

PERSONAL PROJECTS

StargazersViewerApp

React Native mobile application written in Typescript that allows you to search for a GitHub user and it's repository and view its stargazers. The application uses the GitHub API with GraphQL to fetch the stargazers of a repository.

TrackER

Web based energy management and sales software for vendors and building owners, focusing on resource production and consumption. Built using a microservices architecture with the MERN stack and TypeScript.

Cards-Against-Humanity

Cards Against Humanity is a web app card game based on Vite using Socket.IO

SKILLS & INTERESTS

Technical: React, React Native, TypeScript, Redux, Jest, Vitest, Node.js, Express, GitHub Actions, Storybook
Language: Italian (Native), English (Full Professional), Spanish (Elementary)
